# 5G Smart Shipyard

**Digital Twin Innovation for  
Maritime Industry**

Integrated XR, Cloud, AIoT & 3D GIS Technologies

## Company Introduction

Hsinchu  
/ Headquarter  
/ Since 2014

"Integrate XR 、IoT 、AI and Digital Twin technology,  
building a safer, wiser working environment ,  
Implement industrial digital transformation."

Kaohsiung  
/ Branch  
/ Since 2020

# Core Competencies

## Core Competencies

### AR Assistant for Industry Operation •

Our AR/MR assistants optimize industry operations, enhancing efficiency with on-the-job guidance.

### AI Avatar for Education •

Our AI avatars revolutionize education, offering personalized, interactive assistance for dynamic learning.

### • ERP System Development

We're leaders in ERP solutions, streamlining processes, optimizing resources, and enhancing communication.

### • XR Simulation System for Industry Training

We lead in XR simulation for industry training, offering immersive, safe, skill-enhancing solutions.

### • Digital Twin for Shipyard

Digital twin tech optimizes shipyard ops, offering real-time insights for efficient manufacturing.

# Application of Storage Location Management in Smart Shipyards

## Core functions of an intelligent storage location management system:

- **3D visual storage management:** use 3D models so managers can directly see space usage and block locations.
- **Block-space matching:** the system automatically assigns the best storage slot based on block size and shape to avoid wasted space.
- **Smart dispatching:** it auto-plans lifting and handling schedules from block needs and storage status, then sends tasks to staff and equipment.
- **Real-time monitoring:** sensors and networks track storage use and block movements and feed this back to managers for quick decisions.

## **Application of Storage Location Management in Smart Shipyards**

- **Batch conversion of design models into interoperable formats**
- **Enable asset tracking and component management**
- **Support real-time warehouse location visualization**

# How to improve the efficiency and accuracy of shipbuilding

Empower AI applications to enable intelligent management.

**5G AIoT technology** gives AI applications a strong network foundation, making smart shipyards possible. High-resolution images can be sent over 5G to backend AI systems for analysis, enabling.

**Smart inspection:** automatically recognizing hull storage conditions, abnormalities, and storage-space usage to improve inspection speed and quality.

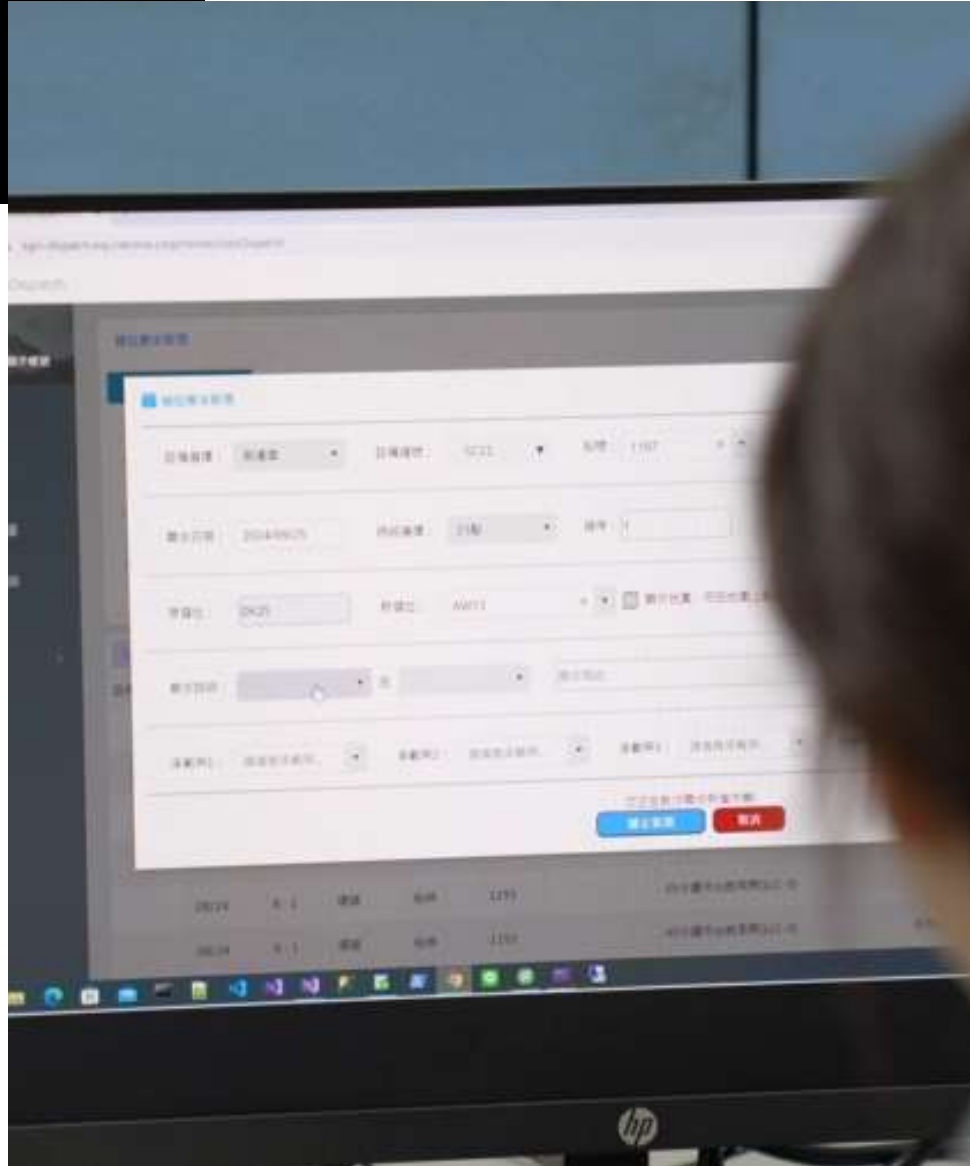

**Smart dispatching:** planning lifting and handling tasks based on block needs and storage status to optimize resource allocation.

**Smart inspection enhance:** using AI to analyze equipment data, predict failures early, and schedule maintenance in advance to avoid production delays.

## Benefits of applying an intelligent storage location management system

- **Improve space use:** smart slot allocation and management maximize storage space and cut waste.
- **Optimize material handling:** the system plans the best put-away and pick-up routes to shorten travel distance and time.
- **Boost productivity:** smart storage ensures timely and accurate material supply, reducing waiting and raising throughput.
- **Reduce safety risks:** the system monitors storage conditions to prevent overloading, collisions, and other accidents.

# Real-time shipyard data and comprehensive monitoring

1. Integrate the data flows and subsystem architectures of all departments to establish an “Integrated Smart Shipyard Operations Center.”
2. Use a 5G private network environment to connect each department’s information flows and systems in real time into a unified digital intelligent system.
3. Present the collected smart-shipyard manufacturing information through a 3D dashboard, providing intuitive operation and enabling real-time monitoring of system status on graphical panels.

# Connected & Frontline Worker

Empower worker workforce with digital contents and XR devices that offer the best experiences for collaboration and productivity.

Empower worker workforce with digital contents and XR devices that offer the best experiences for collaboration and productivity.

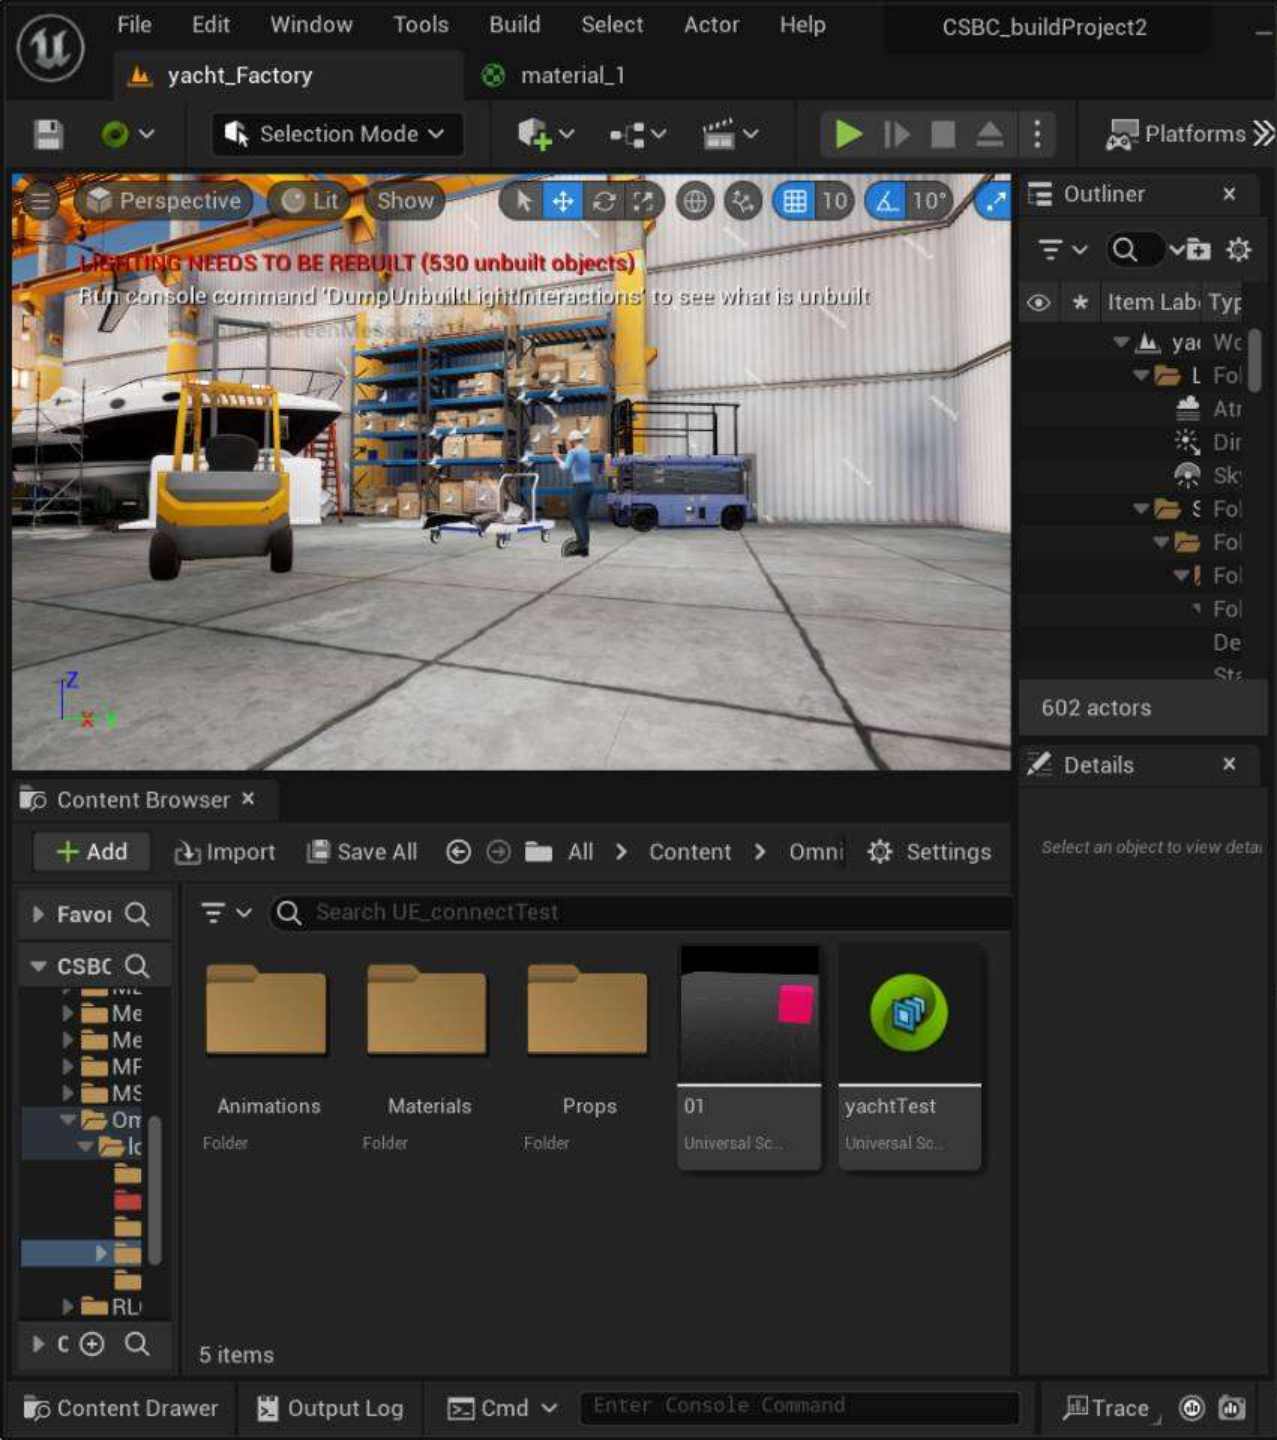

# Smart Food Safety Application

## Using a 5G Private Network with AR and AI technologies in Meat Processing Production Lines

This project integrates them into the food processing industry to build a remote, cyber-physical AR factory tour experience. It enables a zero-risk, highly flexible immersive tour and is also applied to food-plant safety inspections to realize paperless, AI-driven smart inspections.

Strength Weaker than Descendants

# Japanese companies leverage NVIDIA technologies to enable digital twin applications and drive future industrial innovation.

2024/11/14 03:37 Apple Daily Taiwan – A comprehensive report by Lu Cheng-che.

As Japan **faces population decline** and labor shortages, companies are turning to advanced **digital twin and AI technologies** to boost productivity and address workforce gaps. Major players such as **Toyota Motor, Yaskawa Electric, Seven & i Holdings, and Rikei Corporation** are already making strong progress, using **simulation and automation** to pave the way for future industrial development.

Toyota is using the **NVIDIA Omniverse platform** to physically simulate robot motions and enhance its metal forging production capacity.

**THANK YOU**
